

Digital Content Creation Toolkit

Audio only

In person

Use one of two cameras - with or without external microphone then rip/unlink the audio using Premiere Pro at desk 21. You can use some of the plug-ins to clean the audio.

Use the digital audio recorder with a lavalier microphone (use headphones to set monitor) Our current note taking device has a microphone input but is soon to be replaced for meetings.

Remotely

Riverside FM audio only recording - Remember producers don't appear on the recording. Currently our plan doesn't include multi-track.

Google Meet / Teams recording - Remember to turn off what ever compression you are able to switch off in the meeting settings. then rip/unlink the audio using Premiere Pro at desk 21. You can use some of the plug-ins to clean the audio.

Video

In person

Use up to two cameras - the two cameras in the office are incredibly hard to colour match but there are two cameras, two microphones, some wireless receivers and shotgun mounts for the cameras. There is a three light set up that can be used. Speak to Tom.

Screen recording options - Premiere or Articulate Replay or a newer version of MicroSoft PowerPoint (very rare as we are on google). Don't discount Google Meet / Teams recording with zoomed content as a method of doing this.

Remotely

Riverside FM audio only recording - Remember producers don't appear on the recording. Currently our plan doesn't include multi-track.

Google Meet / Teams recording - Remember to turn off whatever compression you are able to switch off in the meeting settings. then rip/unlink the audio using Premiere Pro at desk 21. You can use some of the plug-ins to clean the audio.

Vyond - Animation tool, there are people with licenses who will lend you the use of their accounts.

Animaker - Slightly worse animation tool that the region has a license for.
